### Instructions

- Use **black** ink or ball-point pen.
- Fill in the boxes at the top of this page with your name, centre number and candidate number.
- Answer **all** questions in Section A.
- In Section B, answer **all** of questions 6(a) to 6(e) and **one** question from 6(f) or 6(g).
- Answer the questions in the spaces provided there may be more space than you need.

# Information

- The total mark for this paper is 80.
- The marks for each question are shown in brackets
   use this as a guide as to how much time to spend on each question.
- Calculators may be used.

# Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.

Turn over 🕨

me questions must be answered with a cross in the box ⊠. If you chang answer, put a line through the box ⊠ and then mark your new answ You are advised to spend 25 minutes on this section e the data to support your answers where relevant. You may annotate	
a the data to support your answers where relevant. You may annotate	1.
in your answers.	and include diagrams
(a) Define the term 'national income'.	(1)
(b) Which <b>one</b> of the following is an injection into the circular flow of incc	ome? (1)
A Taxation	
B Imports	
C Investment	
D Saving	
(c) Define the term 'circular flow of income'.	
	(2)
(Total for Questi	on 1 = 4 marks)

**2** The table below shows GDP per capita at purchasing power parities (PPPs) for a selection of European countries in 2013.

Country	GDP per capita (US\$, at PPPs, 2013, rounded)
UK	38 500
Spain	33 000
Italy	35 500

(Source: http://data.worldbank.org/indicator/NY.GDP.PCAP.PP.CD)

(a) Define the term 'purchasing power parities'.

(2)

(b) The Office for National Statistics estimates that the UK population was 64 million in 2013. Using the data, what was the UK's total GDP in 2013?

- A \$2 464 000 million
- **B** \$2 272 000 million
- C \$1 662 000 million
- D \$2 112 000 million

### Extract A

#### Britons should not fear rise in interest rates

The Monetary Policy Committee (MPC) of the Bank of England is prepared to raise interest rates "in the near future" if inflation increases, one of its senior policymakers has warned.

Kristin Forbes, a member of the MPC, said a rise in borrowing costs would also be necessary should household debt reach unhealthy levels. However, she stressed that this was not yet a cause for concern.

With the UK's base rate of interest at 0.5% and inflation at a record low and expected to be negative, the MPC is currently under no pressure to raise interest rates, despite Britain's economic recovery.

UK inflation is being driven lower by the slump in global oil prices, which have roughly halved since summer 2014, and the Bank's governor Mark Carney warned earlier this month that a strong domestic economy would translate into higher UK inflation over the medium term. "The most likely next move in monetary policy is an increase in interest rates. The message is clear," Carney said.

Forbes said that "even the more lagged effects of the rise in the value of the pound will likely peak in the first part of this year and also gradually fade. Inflation will then most likely bounce back.

"Since interest rates take well over a year to be fully effective, they should be adjusted to respond to inflationary risks at that time horizon – when all of these effects have diminished – rather than respond to today's inflation."

(Source: adapted from http://www.theguardian.com/money/2015/feb/24/ britons-should-not-fear-rise-in-interest-rates- when-they-come-says-boe-member)

#### **Extract B**

#### **Deflation is bad news**

The problem with deflation is that once you have it you can't get rid of it. Central banks know what to do about inflation but they do not have the policy tools to deal with deflation when interest rates are almost as low as they can go. Just look at Japan, which had deflation in nine separate years from 1999-2012, with two additional years at zero, averaging minus 0.3%. The highest in any single year was minus 1.3% in 2013.

In the European Union (EU) in 2008, at the start of the financial crisis, there were fears of deflation but at that time central banks had the ability to cut interest rates by nearly 5 percentage points. Those fears may now be coming true, with the EU experiencing deflation of 0.5% in 2015.

This was driven primarily by declines in energy prices, but there was also deflation in non-energy industrial goods and telecommunications. The collapse in the cost of shipping goods potentially suggests something deeper is going on and may lead to a more persistent form of deflation than Mark Carney has currently claimed.

(Source: adapted from http://www.independent.co.uk/news/business/comment/david-blanchflower/ david-blanchflower-deflation-is-bad-news--and-britain-is-likely-to-be-next-to-get-it-10078832.html)

6	(a)	With reference to Figure 1, explain the term 'real income'.	(4)
	(b)	Assess the likely impact of falling real incomes on UK consumers.	(10)
	(c)	With reference to Extract A, explain the likely effect of a rise in the value of the pound on aggregate demand.	
			(5)
	(d)	With reference to the data, explain <b>two</b> likely reasons for the UK's falling inflation rate.	
			(6)
	(e)	With reference to Extracts A and B and your own knowledge, discuss whether the MPC should be concerned about the risk of deflation in the UK economy.	
			(15)
An	swe	er EITHER	
	(f)	Evaluate whether the MPC has been successful in controlling the UK's inflation rate since 2011.	
			(20)
OR			
	(g)	Evaluate demand-side policy responses to the Global Financial Crisis of 2008.
